Statement about Environmental Corrosion

The owner maintains a very aggressive approach toward environmental corrosion and corrosion control with the following actions:

- Main Rotor and Tail Rotor Blades are cleaned daily wiped with an anti-corrosion solution during the post-flight
- Main Rotor Tip Caps are removed at every 100-hour inspection, then cleaned, prepped, and painted
- Blade tips are inspected, cleaned, prepped, and painted as well
- Tail Rotor Blade leading edges are cleaned, stripped, inspected, and painted at every 100-hour inspection
- Tail Cone, Vertical Stabilizer, Mast Fairing, and Side Panels, which are all replaced at overhaul (Historically Tail Cones are replaced at 4400 hours, not the case for this helicopter)
- During the overhaul, Tail Rotor and Main Rotor Control hardware are cleaned, prepped, and painted as needed.
